Animals are called pests when they cause damage to agriculture by feeding on crops or parasitising livestock, such as codling moth on apples, or boll weevil on cotton. An animal could also be a pest when it causes damage to a wild ecosystem or carries germs within human habitats. Examples of these include those organisms which vector human disease, such as rats and fleas which carry the plague ...

Etymology and scope. The word agriculture is a late Middle English adaptation of Latin agricult?ra, from ager, "field", which in its turn came from Greek ?????, and cult?ra, "cultivation" or "growing". While agriculture usually refers to human activities, certain species of ant, termite and ambrosia beetle also cultivate crops. Agriculture is defined with varying scopes, in its broadest ...
