PHASE DIAGRAM - WIKIPEDIA

PHASE RULE - WIKIPEDIA

## phase diagrams and heterogeneous pdf

The simplest phase diagrams are pressure–temperature diagrams of a single simple substance, such as water. The axes correspond to the pressure and temperature. The phase diagram shows, in pressure–temperature space, the lines of equilibrium or phase boundaries between the three phases of solid, liquid, and gas. The curves on the phase diagram show the points where the free energy (and other ...

## Phase diagram - Wikipedia

The phase rule is a general principle governing systems in thermodynamic equilibrium. If  $F$  is the number of degrees of freedom,  $C$  is the number of components and  $P$  is the number of phases, then  $F = C - P + 1$ . It was derived by Josiah Willard Gibbs in his landmark paper titled *On the Equilibrium of Heterogeneous Substances*, published in parts between 1875 and 1878.

I love this new *GWB*. An X1t script that took 40 minutes to complete on my 12-core desktop now runs in 2.5 minutes. Amazing. – Karen Johannesson, Tulane University. The Professional edition of *The Geochemist's Workbench® Release 12* is the complete suite of tools to meet every practicing geochemist's needs. *GWB Pro* is your choice for computing phase diagrams and modeling reactive transport.

Dual-phase steels (DP steels) consist of ferrite and a dispersed hard martensitic second phase in the form of islands. Usually they are low-carbon low-alloy materials with 10-40 vol.% hard martensite or martensite-austenite particles embedded in a ductile ferrite matrix. As they combine high strength and good formability at low production costs they are widely used for automotive applications.

Phase change materials (PCMs) used for the storage of thermal energy as sensible and latent heat are an important class of modern materials which substantially contribute to the efficient use and conservation of waste heat and solar energy.
