The predictive value of symptoms in the diagnosis of UTI has been frequently studied ().In a comprehensive systematic review by Bent et al 11 in 2002, the positive predictive value (PPV) of self-diagnosis in women with recurrent UTIs was 84%. The likelihood ratio (LR)+ (that is, the true-positive rate of self-diagnosis of UTI divided by the false-positive rate; for further explanation, see ...

Deep venous thrombosis (DVT) is a manifestation of venous thromboembolism (VTE). Although most DVT is occult and resolves spontaneously without complication, death from DVT-associated massive pulmonary embolism (PE) causes as many as 300,000 deaths annually in the United States. [] See the image below.

According to the Autism Society of America, autism is a complex developmental disability that typically appears during the first three years of life and affects a person's ability to communicate and interact with others. Autism is defined by a certain set of behaviors and is a "spectrum disorder" that affects individuals differently and to varying degrees.

About This Program. Target Population: This program is not a client-specific intervention, but a full-system approach that targets the entire organization with the intention of improving client care and outcomes. The focus is to create a trauma-informed and trauma-sensitive environment in which specific trauma-focused interventions can be effectively implemented.
